Computer Recommendations for ImmPact

The recommendations below shows the minimum features your PC should have in order to run ImmPact. These recommendations are for IBM-compatible machines. (MacIntosh users should check with their technical support or a MacIntosh dealer to see what would be the most optimal configuration to interact with an internet-based application.)

The minimum configuration will run a web browser and the ImmPact internet-based application. Additional computing power might be needed to run other software used in your office. Check with the producer of that software to see what is needed.

When purchasing a new computer, it is often best to purchase the best you can of everything for the price you can afford.

Minimum System Configuration

- **486 DX 50 to 100 Mhz Computer with Monitor**
- **Memory** - 8 Megabytes (MB) *16 MB or more can speed things up considerably*
- **Hard Drive** - 200 to 300 MB of free disk space
- **Modem** - 28,800 baud or greater *33,600 or 56,000 modems may download data faster. Talk to your Internet Service Provider to discuss your choice of modem to identify makes and models that are more compatible with the modem that you will connect with.*
- **Operating System** - Windows 3.1, Windows95 or Windows98
- **Web Browser Software** - Version/revision 4.0 or greater *Microsoft Internet Explorer and Netscape Navigator are two good choices and are available for free download from the Web or most internet service providers*
- **Internet Access Software** - May be required in some cases. *Your Internet Service Provider should supply this software and provide installation support*
- **Printer** - Desk Jet or Laser

Other Items to Consider – not necessary to run ImmPact

- **Floppy Disk** - 3 1/2" High Density floppy
- **CD-ROM** - 6X or faster recommended for loading software applications, but not required
- **A Dedicated Phone Line** - with the jack located near the computer in order to speak with patients or ImmPact support while accessing ImmPact.
- **14" or 15" Super VGA Non-interlaced Color Monitor** with a dot pitch of 0.28 mm or smaller
- **Video Card** with 2MB of Ram or more (speeds up graphics display)
